

Episode 1: Why we built AI that forgets on purpose

Hosts: Zain Ahmed (Founder) + Co-host (Friend)

Length: ~20 minutes · **Date:** June 2026

Website: <https://www.shadowtalk-ai.com>

Checkout: shadowtalk-ai.com/founder-access?plan=pro

Pre-show checklist

- Mic check — both hosts at equal volume
- Water nearby, phone on silent
- URL on screen: [shadowtalk-ai.com](https://www.shadowtalk-ai.com)
- JazzCash number ready: 03211798561
- Vibe off the script — don't read robotically

Segment 1 — Cold open (0:00–1:30)

FRIEND: Okay, real talk — how many of you have typed something into ChatGPT and immediately thought... "wait, should I have said that?"

ZAIN: Literally everyone. You ask about a personal problem, a business idea, something embarrassing — and it's just... there. Saved. Processed. Somewhere in the cloud.

FRIEND: And you have no idea who can see it, who trained on it, or if it'll show up again in six months.

ZAIN: Exactly. That's why we built ShadowTalk AI — private AI chat for people who actually care about what happens to their words.

FRIEND: I'm [Friend's name].

ZAIN: And I'm Zain — founder of ShadowTalk. We're two guys from Pakistan trying to build something the big AI companies won't.

FRIEND: Let's get into it.

Segment 2 — Intro & hook (1:30–4:00)

FRIEND: So Zain — before we explain features and all that — why did you start this? You're 17. You could've just... used ChatGPT like everyone else.

ZAIN: Honestly? I was using it. Everyone is. But the more I built with AI — code, ideas, personal stuff — the more uncomfortable I got. It felt like every conversation was a permanent record I never agreed to.

FRIEND: Like leaving your diary open in a coffee shop.

ZAIN: Perfect analogy. Students use this for homework. Developers paste code and API keys. Founders talk about unreleased ideas. All of that goes somewhere.

FRIEND: And the big companies' answer is basically "trust us."

ZAIN: Right. ShadowTalk's answer is different: privacy first. Stealth mode. Options to work more locally. You control the vibe — not some black box in California.

FRIEND: Okay but be honest — is this just "another ChatGPT wrapper"?

ZAIN: Fair question. ShadowTalk is a full platform — chat, agents, mission control, templates, offline options, admin tools. It's not a weekend project with a landing page.

FRIEND: So what's the one sentence pitch?

ZAIN: ShadowTalk is private AI for people who take their data seriously — students, builders, and founders who don't want every thought logged forever.

Segment 3 — The problem (4:00–7:00)

FRIEND: Give me three types of people who should not be using normal AI the way they do today.

ZAIN: One — Students. Mental health, family stuff, assignments — all tied to you forever. Two — Developers. Code, logs, credentials by mistake. Three — Founders. Unreleased ideas you don't want the internet trained on.

FRIEND: So ShadowTalk is for anyone who's ever thought: "I wish this conversation didn't exist after I closed the tab."

ZAIN: That's literally the brand. Shadow — it fades. Talk — you still get the power of AI.

Segment 4 — What ShadowTalk does (7:00–11:00)

FRIEND: Walk me through what someone sees when they open shadowtalk-ai.com.

ZAIN: Clean AI chat. Sign up free. First — Privacy & stealth. Second — Mission Control, agents, templates. Third — Offline/local options. Especially important in Pakistan.

FRIEND: What would I use it for?

ZAIN: Homework, coding, planning, venting — safely. I dogfood my own product daily. Video studio for Pro users — TikTok, Reels, Shorts.

Segment 5 — Founder story (11:00–14:00)

FRIEND: 17. Karachi. Building an AI company. That's not normal.

ZAIN: Pakistan has smart people who deserve world-class tools. Hardest parts: payments — Stripe doesn't work here for a 17-year-old. So JazzCash, Easypaisa, USDT. And deployment — if users don't see updates, you built nothing.

FRIEND: Traffic but no revenue?

ZAIN: Over a thousand visitors in 90 days. 48% US. People stay. Payments were blocked — that's changing now. Advice: ship, talk to users, solve your own problem first.

Segment 6 — Pricing (14:00–16:30)

FRIEND: Is it free?

ZAIN: Free tier yes. Pro Rs 1,499/mo. Premium Rs 3,999. Elite Rs 5,999. JazzCash/Easypaisa: 03211798561. Bank: Meezan PK08 MEZN 0099 1701 1274 9131. Upload receipt on site — verified within 24h.

FRIEND: Why not Stripe?

ZAIN: I'm in Pakistan and seventeen. We built our own path instead of waiting for permission.

Segment 7 — Hot takes (16:30–19:00)

FRIEND: "If you're not paying for AI, you're the product."

ZAIN: Mostly true. We offer free to try, pay for real value.

FRIEND: "Privacy AI is for criminals."

ZAIN: Privacy is for everyone — students, doctors, founders, normal people.

FRIEND: "Pakistan can't build global AI."

ZAIN: Watch us. Nearly half our traffic is from the US.

Segment 8 — Closing (19:00–21:00)

ZAIN: Try shadowtalk-ai.com free. Upgrade at [founder-access?plan=pro](https://shadowtalk-ai.com/founder-access?plan=pro). Share with one friend who pastes sensitive stuff into ChatGPT.

FRIEND: JazzCash Pro is less than some phone packages. Private AI isn't just for Silicon Valley.

ZAIN: AI for everyone — but your data stays yours. Episode 2: live demo and roast my bugs.

BOTH: Peace.

Bonus — TikTok clips

1. "ChatGPT remembers everything. We don't." — Zain
2. "I'm 17 and Stripe said no — so we use JazzCash." — Zain
3. "Three people who shouldn't use normal AI" — segment clip
4. "Rs 1,499 for private AI" — Friend
5. "Privacy isn't for criminals" — Zain

Key facts

Topic	Detail
Pro	Rs 1,499/month
Premium	Rs 3,999/month
